EDUCATION

University of the East - Manila
Bachelor of Science in Information Technology - 2018 to 2024

WORK EXPERIENCE

Authentic Caps Distribution Inc. – Front-end Developer | Full-Stack Exposure October 2024 – Present
Corporate Website for Authentic Holding Company Inc

- Collaborated with department heads and stakeholders to transform business requirements and use cases into well structured, reusable UI components following frontend best practices.
- Developed responsive and user-friendly interfaces for both internal tools and customer-facing systems, ensuring cross-device compatibility while enhancing usability and overall user experience.
- Developed and maintained a corporate website supporting 500+ employees/clients, enhancing access to up-to-date company information and improving recruitment efficiency.

Asset Inventory System for New Era

- Designed and implemented an Asset Inventory System that tracks over 200 assets across 9 departments, reducing asset loss and manual tracking through a centralized digital solutions.
- Implemented REST API's, database logic, and authentication to support front-end functionality

Giordano Ticketing System

- Actively building a Ticketing System designed to handle over 600 tickets per month, improving issue visibility, status tracking and resolution monitoring to support more efficient.
- Created an analytics dashboard that visualized tickets trend, identifying top recurring issues and departments with the highest ticket volume to support data-driven decisions.

VIP Redemption System

- Developed a VIP customer redemption system allowing customers to redeem reward points for 6 products, supporting 600+ active VIP users and improving customer engagement and loyalty.

Crud Project with Kong, Kafka, Temporal

- Built a CRUD application with Next.js, using Kong as the API gateway, Kafka for event-driven messaging, and Temporal for workflow orchestration, all containerized and run using Docker.

Corporate CMS Deployment

- Hosted and maintained a CMS on a physical server for a corporate website, exposing the public IP and integrating Cloudflare for domain management, security, and performance optimization.
- Added and configured content types in Strapi CMS based on the corporate website's structure, and integrated them into the frontend by connecting to CMS API endpoints to dynamically render content.
